

**Butler Community College**  
**Department of Nursing**  
**Health Requirement Frequently Asked Questions**

The clinical agencies with which we are affiliated have policies requiring annual physical exams, immunizations, and TB screenings for all nursing students. The following must be completed before the first day of class. **The health form, CPR card, medical insurance card, and immunizations need to be completed and turned in to College Health on or before the first day of class. If you have questions, please contact College Health Services (316) 322-3371 or (316) 323-6282.**

- ❖ Butler Health Form must be completed within the last 3 months and signed by a **physician (MD or DO), physician assistant (PA), or nurse practitioner (APRN)**. If you are an EMT, LPN, or CNA and took the Butler IV Therapy, EMT or CNA course the semester prior to your admission, the 3-month deadline will be waived, but must be within the last year and will be repeated annually.
- ❖ Immunization record (on the back of Butler Health Form)
  - It must be signed at the bottom of the form by a health care provider.

**Immunization record must include the following documentation:**

- TDAP (tetanus, diphtheria & pertussis) within the past 10 years.
- Hepatitis B 3-Dose series, a signed refusal form, or positive titer.
- MMR 2-Dose series (unless you were born before 1957) at least one month apart or a positive titer for measles, mumps, and rubella.
- Sars/Covid-19 Vaccines
- Influenza vaccine yearly after September 1<sup>st</sup>.
- TB skin testing must be completed prior to Varicella and MMR vaccines.
- Students entering the Butler nursing program for the first time must show documentation of a 2-Step TB Skin Test OR QuantiFERON Gold or T-Spot (blood test).
- The PPD Mantoux is the acceptable test. The TB Tine test is not acceptable. The date of the test, who gave and read it and results in millimeters must be documented.
  - QuantiFERON TB Gold (QFT-G) or T-Spot are blood tests that are used by some health care agencies. It requires a blood specimen and the results are usually available in 24 – 48 hours.

**I had a physical at the hospital where I work. Can I use that?**

If you have had a recent employee physical, a copy attached to the Butler Health form is acceptable. The employee physical also must be less than 3 months old.

**I had a positive TB skin test earlier in my life. I was told not to get another test. What documentation must I provide?**

If you have had a positive TB skin test in the past, you must provide documentation of a negative chest x-ray within the last 5 years and the physician should document that you do not have any signs or symptoms of tuberculosis or receive the Quantiferon Gold/T-Spot (TB blood test). A Quantiferon Gold or T-Spot is the recommended TB screening if you are foreign born and/or have received the BCG vaccine, as the results are not affected by the BCG vaccine.

**I have all my immunizations recorded on a pink Kansas Immunization Record or a military record. Is this acceptable?**

Yes. Please bring the pink Kansas Immunization card or military records to College Health Services so copies can be made and recorded.

Proof of immunization includes:

1. Evidence of the vaccination on an official record such as the Kansas Immunization Record (pink card), school records, or the International Immunization Record (yellow card)
2. A statement from a physician confirming previous illness
3. Positive titer results for each disease, i.e., MMR will need a positive titer for measles, mumps, and rubella.

**Do I really have to have 2 MMR immunizations?**

Yes, unless you were born before 1957 in which case you only need to show documentation of one MMR.

**I had titer testing while I was pregnant. Can I use this for documentation for the MMR immunization?**

The usual OB Panel includes Hep B and Rubella Titers only. Documentation of positive titer results for measles, mumps and rubella is acceptable. Please note: Documentation must include positive titer results for all three diseases: measles, mumps, and rubella. If you cannot provide documentation of positive titers for all 3, you must fulfill the MMR immunization requirement - Two MMR's (unless you were born before 1957 in which case you only need to show documentation of one MMR). If you are pregnant, live vaccines are not recommended, so Varicella and MMR will be waived with a letter from your physician until after delivery.

**I have to get both a TB skin test and an MMR. Is there a specific order in which I should do these?** Yes. If the student needs to receive the MMR, please COMPLETE the TB skin test BEFORE proceeding with the MMR. (CDC, General Recommendations on Immunizations, p. 26). Otherwise, you will have to wait 30 days before getting the TB skin test. Vaccination with live viruses may interfere with Tuberculin Skin Test reactions and Quantiferon Gold. Quantiferon Gold should be administered either on the same day as vaccination with live-virus vaccine or 4-6 weeks after the administration of the live-virus vaccine

**I had chicken pox. Do I have to get the titer drawn?**

The student must be immune to varicella (chickenpox). A note from the physician documenting date of disease is **NOT** acceptable. A titer must be done that indicates immune status. If immunity is not present, the two-dose varicella immunization must be obtained.

**Is there a specific order I should get the immunizations that I need?**

Be sure to complete your TB skin test first before getting live vaccines, MMR & Varicella.

There is a 30-day waiting period between the two MMR vaccines and the varicella vaccines. A student may get an MMR and the Varicella vaccine on the same day, but if the student does not get both on the same day, then there is a 30-day waiting period between the MMR and the Varicella vaccine since they are both live vaccines.

**My doctor told me that the Hepatitis B vaccine will take 6 months to complete. I cannot get that done before the due date for the health record. What do I do?**

The first of the three hepatitis B immunizations must be completed before the start of the clinical experience. All three injections should be completed within the semester. Be sure to keep documentation of the second and third vaccine because you will have to provide that information later in the semester.

**I cannot locate my immunization records at all. What do I do?**

Students must have proof of immunizations. Upon request, college health staff can look up previous immunizations on the Kansas Registry. You must complete all immunizations listed prior to clinical. You may have blood work done to confirm immunity to Measles, Mumps, Rubella, Varicella and Hep B. Be sure to complete the TB skin testing PRIOR to starting the two MMR immunizations. If you do not have documentation of any tetanus immunizations, you must show proof of at least one Tdap (with the pertussis).

**Please contact College Health via e-mail [collegehealth@butlercc.edu](mailto:collegehealth@butlercc.edu)  
or call 322-3371 or 323-6282 for information or immunization questions.**

We strongly encourage you to keep a record of these immunizations since you will need them for future health care employers.

You will receive a computerized copy of your immunizations each semester you are a nursing student at Butler through your Butler Pipeline email address. If you are NOT receiving the emails, or feel your record is incorrect, please contact Butler College Health Services as soon as possible.
